

COVID-19 Monitoring

Basic Concept

To gain more accurate understanding of epidemiological situation of COVID-19 and the impact on healthcare system in Tokyo based on the clinical and epidemiological perspectives of the experts.

Methods

Monitoring by a team of experts

- ✓ **The medical practitioners and the experts in infectious diseases and epidemiology and other relevant fields analyze the situation with the indicators and provide advice (generally on a weekly basis).**
 - Give comments on each indicator (e.g. epidemiological situation, the impact on healthcare system)
 - Provide a summary on each indicator and an evaluation of the epidemiological situation in Tokyo.

Monitoring meeting

- ✓ **The comments and advice of the expert team are reported at the monitoring meeting.**

The outbreak has been continuing in a large scale.

The infection is spreading.

There are signs that the infection will spread.

The number of confirmed cases has been within a certain level.

Response by Tokyo

- ✓ **Various interventions by the Tokyo Metropolitan Government are evaluated and the additional approaches are discussed if necessary, based on the epidemiological situation of Covid-19 and the impact on healthcare system reported at the monitoring meeting.**
