

About COVID-19 Monitoring

Basic Concept

To gain more accurate understanding of the COVID-19 situation and the health care system in Tokyo based on analyses from the medical and epidemiological perspectives of experts.

Methods

Monitoring by
a team of
experts

✓ **Doctors in clinical practice and experts in infectious disease epidemiology and other relevant fields analyze the monitored situation and provide advice (generally on a weekly basis).**

- Give comments on each monitored item and points to note (e.g. Situation of the spread of infection, health care delivery system)
- Provide a summary on each monitored item and an evaluation of the infection situation in Tokyo as a whole.

Monitoring
meeting

✓ **The opinions of the expert team are reported at the monitoring meeting.**

The infection is spreading.

The infection is starting to spread.

There are signs that the infection will spread.

The increase in confirmed cases is being contained to a certain degree.

Response by
Tokyo

✓ **Various responses by the Tokyo Metropolitan Government are examined, based on the infection situation reported at the monitoring meeting.**
